AI-Auto Execution Project Manager

PlanRea

We'll plan on so you are ready!

IDEA

An AI-powered project management app that turns a goal or assignment into a ready-to-follow plan and automatically schedules tasks into your daily life, so users don't have to think or plan — just execute.

CUSTOMER NEEDS

- People struggle more with starting and following through than planning
- Students and workers often feel overwhelmed by large tasks
- Existing tools require manual organization and discipline

This app solves the "I know what to do, but I can't get myself to do it" problem.

TECHNOLOGY STORY

- Frontend: simple app interface for inputting goals and viewing schedules
- AI: generates task breakdowns and suggested timelines
- Calendar integration: fits tasks into free time automatically
- Notification system: sends reminders and updates

Future versions can add:

- Habit learning (based on usage patterns)
- Smarter, personalized scheduling

Anti-Motivation Drop Design

When user feels overwhelmed:

- "Just start" mode:
  - Gives 1 tiny task only
- Progress visualization:
  - "You're 68% done"

Focus = reduce psychological resistance

HOW DOES IT WORK?

Input → "Zero Effort Planning"

- User gives: Deadline & Goal or document (PDF, text, screenshot, even audio)
- AI converts it into: Task breakdown, time estimates, and priority levels

Context-Aware Scheduling (This is the core innovation)

Instead of static calendars, it uses:

- ***Hard Constraints:*** Classes / meetings (imported calendar)
- ***Soft Behavior Signals:*** Like when you're usually scrolling (low productivity), focused, or at home vs outside.
- ***Real-Time Adaptation:*** If you skip a task → auto-reschedules, and if you finish early → pulls next task forward

The schedule is alive, not fixed.

"Energy Matching" Feature

- Low energy → easy tasks (review notes)
- High energy → deep work (write report)

Tasks are matched to your state to prevents burnout from bad timing.

Action-Based Reminders (Not annoying notifications)

Instead of "Do your homework" you get "You're home, free, and usually scroll → why not do 10 min of biology instead?"

Feels relevant, not spammy

Relaxation & Recovery Mode

- Tracks workload and detects stress or unproductive periods.
- Suggests quick recovery activities like breathing exercises, short breaks, or simple non-addictive games to help users recharge (Games already included in the App too).
